

Pain Dashboard (<https://www.tbindsc.org/StaticFiles/Documents/PainDashboardPublic.html>)

- Presents a multi-site study of individuals with TBI and chronic pain.
- “The goal of the present study is to examine chronic pain and pain treatment after moderate to severe TBI to improve the health and function of these individuals, which through improved patient stratification and treatment guidelines, could lead to improved community participation and employment. Results from this study will not only provide detailed information on chronic pain (e.g., identification of the most common types of pain, co-occurring pain conditions, beneficial treatments), but will also gather key information from treatment providers on the facilitators and barriers to appropriate pain treatment.”
- Includes a Data Summary presenting data in a digestible manner.
- This study disseminates information that may be helpful for providers.
- Last updated June 1, 2021. There are quarterly updates.
