

Virginia Brain Injury Fact Sheet

- Between 2018 and 2020, 16,657 people were admitted to the ER with a traumatic brain injury (DARS Impact Report, 2021).
- More than 300,000 Virginians are estimated to have brain injury complications as a result of a traumatic brain injury or stroke (Brain Injury Association of Virginia, 2023).
- TBI's account for about 30% of all injury-related deaths to Virginia residents each year, and roughly 15% of all injury-related inpatient, acute care hospitalizations (VDH TBI Data and Trends Report, 2017).
- Of more than 15,000 TBI's reported to the Virginia Statewide Trauma Registry in 2021, 13% were classified as severe, 4% as moderate and 82% as mild.

State-Funded Programs

There are 9 community based programs serving persons with moderate to severe brain injury in Virginia; they are funded through a line-item appropriation in the state budget. In FY 2022:

State funded brain injury programs served

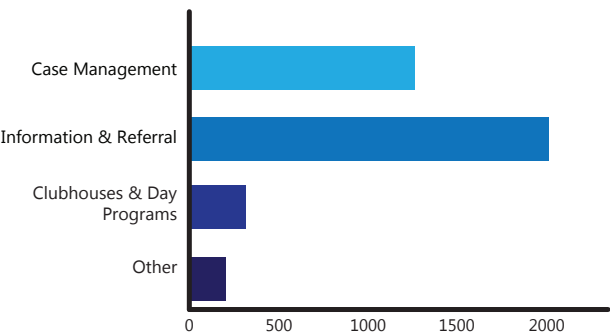

3,827

See chart below.

State funded brain injury programs engaged

9,007

individuals through education and public awareness activities.

Other:
Community Living Connection: Telehealth program for support, education, and social cognitive skill building.
